

SUSPENDED CEILING SYSTEM

ABSTRACT OF THE DISCLOSURE

A ceiling panel system includes a panel, a strut, a support, a fastener assembly configured to secure the strut and the support in spaced relation with at least a portion of the panel sandwiched therebetween, and means for securing the fastener assembly, with the portion of the panel sandwiched between the strut and the support, to a mounting surface. The panel is adjacent to the strut and the panel is positioned over a portion of the support. The fastener assembly includes a bolt having a head and a shaft, and a button for threadingly engaging the shaft. The securing means includes a mount, wherein the head is secured within a channel of the mount and the mount is secured to the mounting surface. The ceiling panel system may also include an edge cover and an edge molding. A method for installing the ceiling panel system is also disclosed.
